

- Project Name:** Adobe Sydney Office, Sussex Street Sydney NSW 2000
Builder: Intermain Pty Ltd
Designer: ODCM
Products Used: KingWood Linear Ceiling System

Overview:

Adobe Sydney office located in Sussex Street was recently renovated. A linear ceiling design was specified for the library area of the office. The ceiling specified was 10 meters long by 5 meters wide.

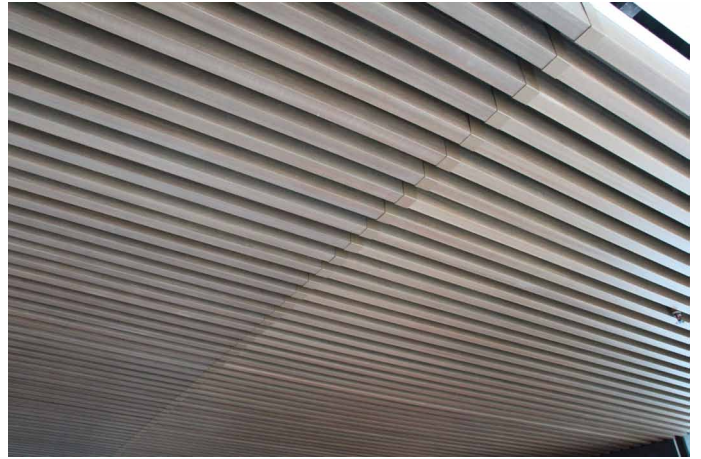

Construction:

During construction as this was a commercial application, services had to be considered. One benefit of the KingWood Linear Ceiling was the ability for the system to be supported by rods which allowed sufficient room for larger services such as air conditioning to run above the ceiling.

Service also had to be run through the ceiling system; this was achieved by the spacing between battens. As there was 50mm spacing between battens allowed the air-conditioning outlet, sprinkler heads and top hung lighting to be penetrated with no interference to the standard system installation.

Due to the clip lock system the battens and spacers were installed with ease and great efficiency. The battens being hollow put no stress on the installers while maintaining a solid timber look.

Conclusion:

The client was pleased with the ceiling system, especially how the look of natural timber was achieved and the cleanliness of the lines.

The designer has stated that there will be great potential for this product in their future works.
